jQuery event.which Property in jQuery

Event Which Property

The event.which property returns which keyboard key or mouse button was pressed for the event.

Example

Return which keyboard key was pressed:

```
$("input").keydown(function(event){
  $("div").html("Key: " + event.which);
});
```

Source Code:

```html
<!DOCTYPE html>
<html lang="en">

<head>
    <meta charset="UTF-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Event Which Property in jQuery</title>
    <style>
        #test1 {
            width: 300px;
            height: 100px;

        }

        #box {
            width: 300px;
```

```
            height: 300px;
        }
    </style>
    <script src="jquery-3.7.1.min.js"></script>
</head>

<body>

    <h1> Event Which Property in jQuery</h1>
    <div id="box"></div>
    <input type="text" id="test1">
    <br>
    <h2></h2>

    <h2></h2>

    <script>
        $(document).ready(function () {
            $('#box').on("Mouseover mouseout mousedown", function (event) {
                $('h2').html(event.type + ":" + event.which);
            });
            $('#test1').on("keydown",function(event){
                $('h2').html(event.type + ":" + event.which);
            })

        });
    </script>
</body>

</html>
```
